**Rougher Use:** Rougher or Hogs are useful for rapid removal of large amounts of material. The Chip Breaker design allows for more cutting fluid to the cutting edge and dissipates heat better. There is a wide range of variations in rougher profile forms for different material groups. The coarser the pitch of the roughing edge, the more material removed the rougher the finish will be. In addition most roughers have eccentric relief so regrinding can be only done on the face of the flute.
